

Reproducing default architecture results – Testing

Running the provided model with the following command:

```
python solution.py --save_dir provided_weights --conv custom
                    --mode test
```

gave us the following results:

Loss = 1.124

Accuracy = 61.26%.

Reproducing default architecture results – Training

Running the model using the custom convolutional layer with the following command:

```
python solution.py --log_dir logs/train/logs
                    --save_dir logs/train/save --conv custom
                    --num_epoch 25 --mode test
```

gave us the following results:

Loss = 2.016

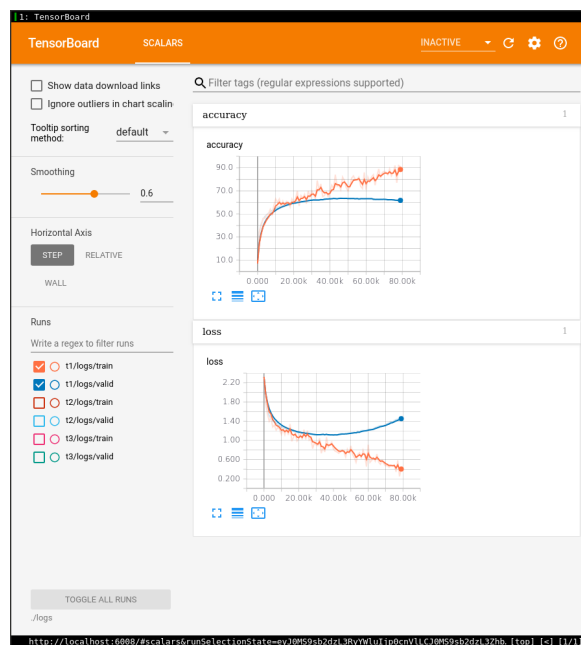

Accuracy = 46.93%

CNN architectures

Architecture 1

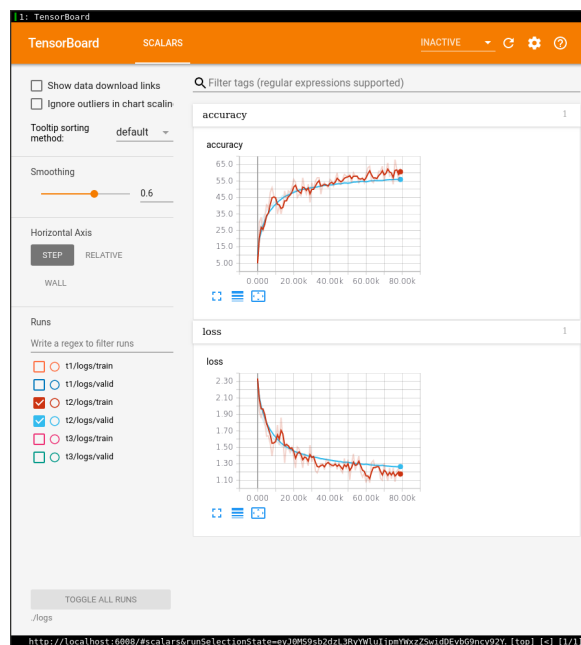

num_conv_outer = 2, num_epoch = 200.

Results: Loss: 1.146. Accuracy: 63.39%.

Architecture 2

nchannel_base = 4, num_epoch = 200.
Results: Loss: 1.265. Accuracy: 55.51%.

Architecture 3

num_conv_inner = 3, num_conv_outer = 2, num_epoch = 25.
Results: Loss: 1.641. Accuracy: 39.30%.
